Designing Mainpage.php.....	3

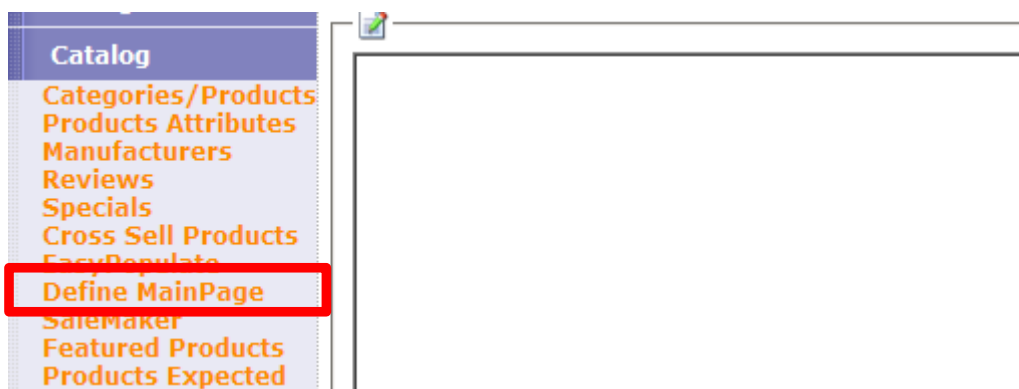

Introduction

The Define Main Page feature allows creating your own design implemented on the Main Page of your web-store. To show this design on the website, you should specify the `main_page.php` module in the Admin Panel > Design Controls > Template Admin section.

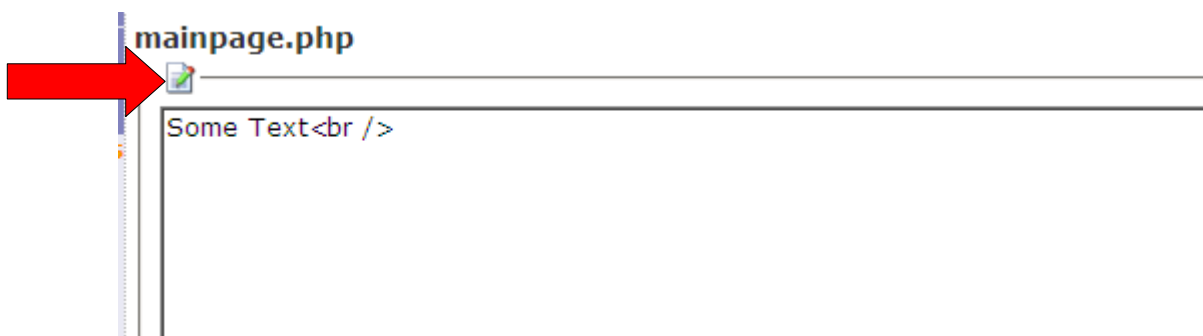

Designing Mainpage.php

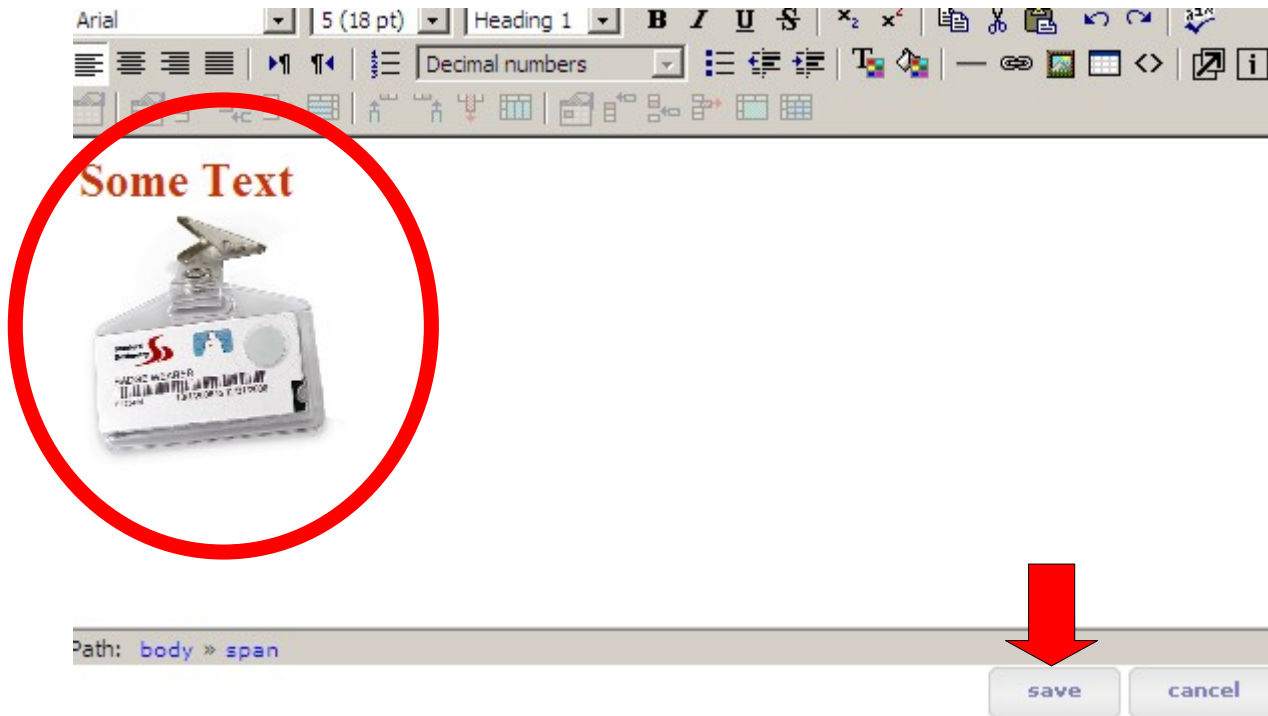

1. From Admin Panel of the web-store click the **Catalog** link and select the **Define Main Page** item.

2. In the **mainpage.php** box, specify some text you want to display in the main page of your web-store. To create more perfect design, use the WYSIWYG Editor (click the WYSIWYG icon at the top of the box).

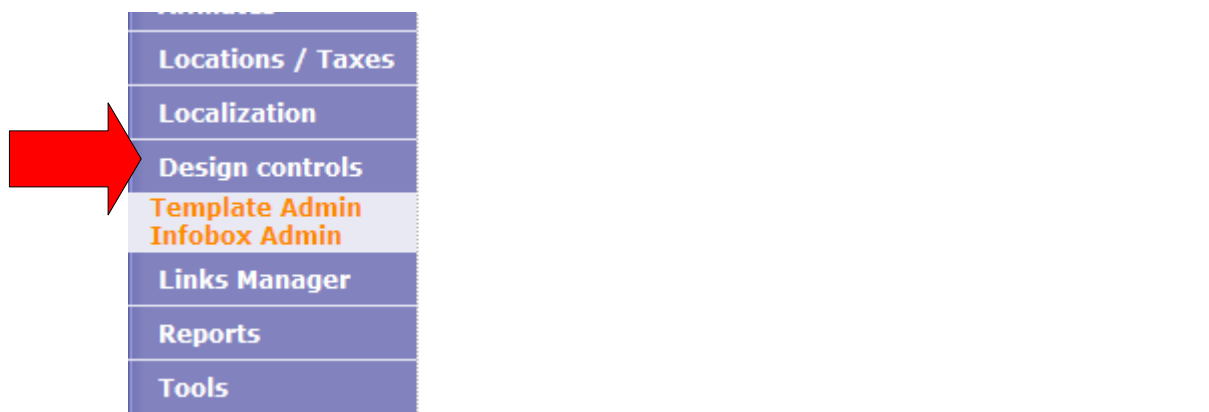

3. In the WYSIWYG Editor window you can add an image, change font, color, and size of the text, etc. Click the **Save** button to save your changes.

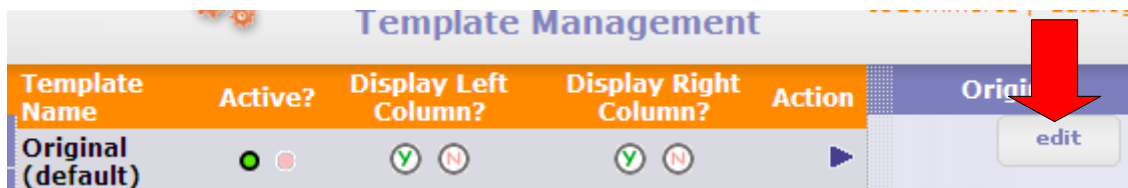

4. Click the **Save** button again.

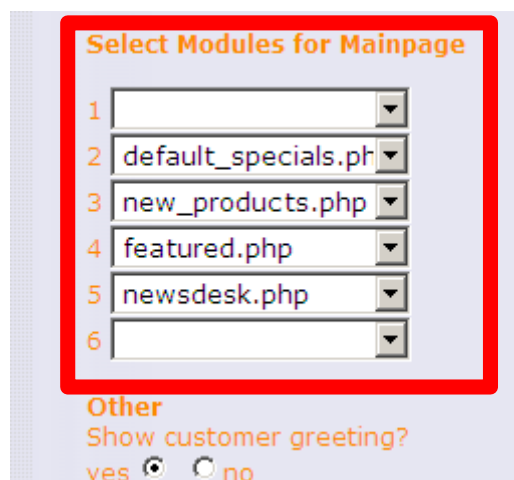

5. Go to the **Design Controls** section of Admin Panel.

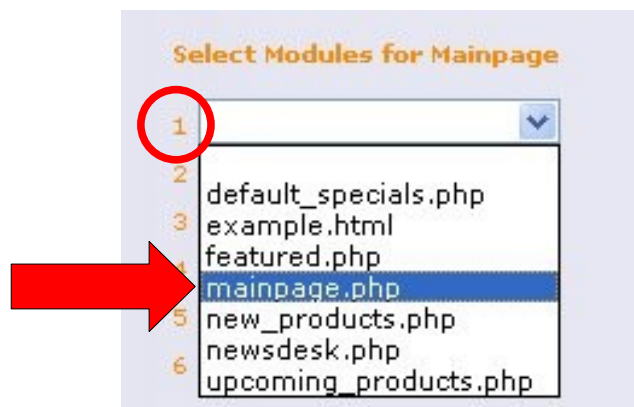

- From the Template Management page click the **Edit** button on the right.

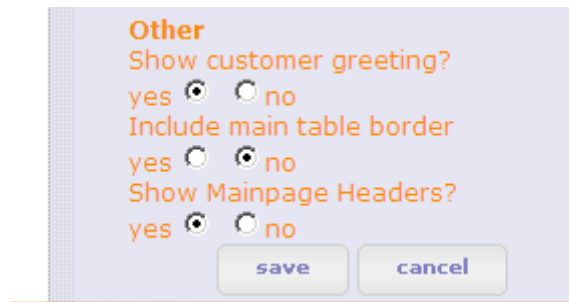

- Find the **Select Modules for Mainpage** section in the right column. This box presents the structure of mainpage segments. There are 6 segments here that means 6 modules can be selected. You can select a module from the dropdown list applied to each segment in order to display the modules in appropriate position on the mainpage.

- Click the “down” arrow adjacent to the field 1 and select the *main_page.php* module.

8. Click the **Save** button at the bottom of the column.

9. Go to the frontend of web-store and preview the results: find your own design of the mainpage.php module displayed on the "1" position (at the top of the page).
