## Introduction

Payment Modules give the store owner a way to interface with several established companies for credit card processing, as well as a few methods that simply store information on the local server for off-line processing. There are also modules available for handling cash, money order, and check payments, which do not involve an external merchant.

The Payment Modules functionality comes with many modules built into the code, although not all are installed initially. Installing a module can be done by clicking on the **Install** button in the right column of Admin Panel, and editing can be done by clicking on the **Edit** button. A module can have its settings edited only after it has been installed.

If other payment modules are placed in the code from the community contributions site, these will need to be installed in the same manner as the ones listed below before using.

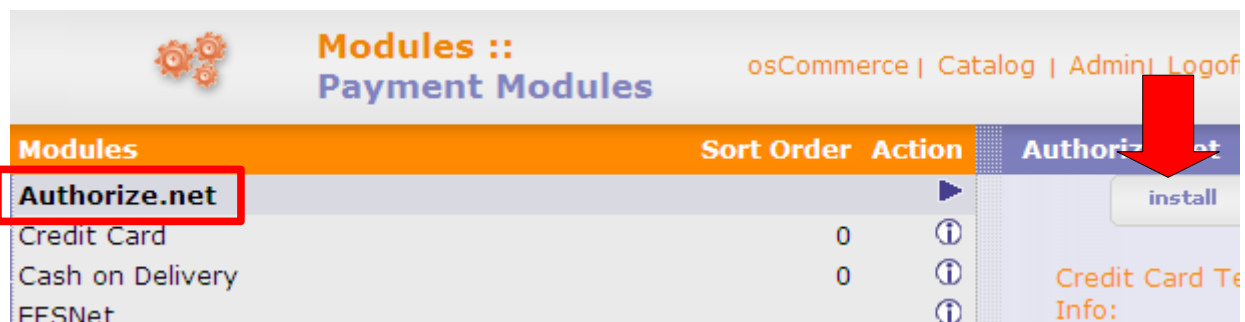

## Authorize.net Module

The Authorize.net module provides an online (instant) payment processing method using a credit card or electronic check to pay for the products. It is a secure Internet bridge between merchant businesses and the credit card and electronic check payment processing networks.

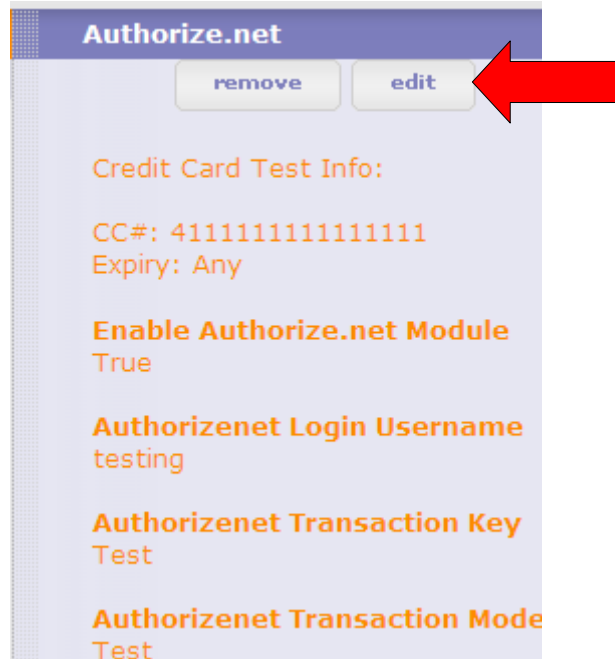

1. From the Admin Panel of webshop click the **Modules** link.

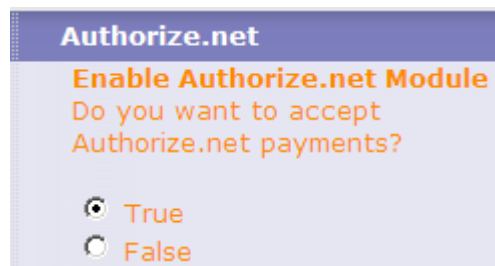

2. The **Authorize.net** module is highlighted by default. If it has not been installed yet, click the **Install** button on the right.

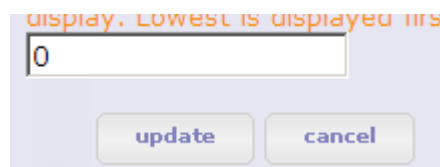

- The default settings will be displayed in the right column. You can change these by clicking the **Edit** button.

The **Authorize.net** module is activated by default (the “True” button is selected).

- You can set up all other fields here as you wish.
- Click the **Update** button at the bottom of the right column to save your settings.

- You can disable module by clicking the **Remove** button on the right.

Modules	Sort Order	Action	Authorize.net
<b>Authorize.net</b>	0	▶	<b>remove</b>

Cash on Delivery	0	ⓘ	

## Banktransfer Module

The Banktransfer module allows paying for the products by money transfer via a bank.

1. From the Admin Panel of webshop click the **Modules** link.
2. Select the **Banktransfer** item in the list and click the **Edit** button on the right. If this module has not been installed, you can install it by clicking the **Install** button on the right.

The **Banktransfer** module is activated by default (the «True» button is selected).

3. You can set up payment properties in the right column as needed.
4. Click the **Update** button at the bottom of the right column to save your settings.
5. You can disable the module by clicking the **Remove** button on the right.

## Payment Settings

In this section we describe payment modules settings displayed in the right column after clicking the **Edit** button from a certain module.

### Login User Name

Specify a login name in this field which will be used for servicing the module.

### Transaction Key

Specify the key in this field which will be used for encrypting TP data.

### Transaction Mode

The Test mode is selected by default. Select the Production (real mode) to enable payment for orders by this module.

### Transaction Method

Select either the Credit Card or eCheck method to pay for orders.

## **Customer Notification**

The False button is set by default. Please select the True button to activate notification emailing (receipt) to a customer.

## **Payment Zone**

Here you can select a zone within which one can receive a payment by this module. The **None** zone is selected by default. Please select a zone in the dropdown list.

## **Sort Order Status**

Here you can set up a status an order will have after paying by this module (Allow Download, Delivered, PayPal Processing, Pending, Processing). Please select a status in the dropdown list.

## **Sort Order of Display**

The Sort Order field associated with each module describes in what order the modules will be presented to a customer during checkout. The modules will always be displayed in alphabetical order in the Administrative tool, regardless of the Sort Order field.

The sorting is done with the lowest number representing the top of the displayed list, except for modules with a value of 0, which are put at the bottom, these are sorted alphabetically.

## **Use Database Lookup For BLZ (used for Banktransfer Module)**

The False button is set by default. Ensure that the table banktransfer\_blz exists and is set up properly and select the True button to activate this feature.

## **Allow Fax Confirmation (for Banktransfer Module)**

The False button is set by default. Select the True button to activate fax confirmation sending.

## **FAX-URL**

In this field specify the fax-confirmation file located in the catalog-dir.

## **Split Credit Card Email Address (for Credit Card Module)**

Put an email address in this field. When a user has registered in a system, the system will automatically send the middle digits of his/her credit card number to this e-mail address.

## **Merchant ID**

In this field specify the merchant's serial number to use for the module service.

## **Account Number (for iPayment Module)**

In this field specify the account number used for iPayment service.

**User ID (for iPayment Module)**

In this field specify the user ID used for the iPayment service.

**User Password (for iPayment Module)**

In the this field specify the user password used for the iPayment module service.

**Transaction Currency**

Select a currency to use for credit card transactions.

**Make Payable To (for Money/Check Order module)**

In this field specify the name of a recipient whom the payments should be made for.

**NOCHEX Email Address (for NOCHEX Module)**

In this field specify an email address for the NOCHEX module service.

**IBS-Site (for Credit Card (Paybox) Module)**

In this field specify the IBS-site supporting the Credit Card (Paybox) module.

**IBS-Range (for Credit Card (Paybox) Module)**

In this field specify the IBS range.

**CGI Path (for Credit Card (Paybox) Module)**

In this field specify a path to the CGI supporting the Paybox, for example, <http://www.maboutique.biz/cgi-bin/paybox.cgi>

**PayPal Email Address (for PayPal Module)**

In this field specify an email address used for the PayPal module service.

**PayPal IPN ID (for PayPal IPN Module)**

In this field specify your business ID at PayPal, usually it is the email address you signed up with. *Note: If you have no an ID, you can create a free PayPal account at [www.paypal.com](http://www.paypal.com)*

**Notify URL (for PayPal IPN Module)**

In the field specify the exact location in which your paypal\_notify.php file resides. For example, [http://test/sub-test/paypal\\_notify.php](http://test/sub-test/paypal_notify.php).

**Use cURL (for PayPal IPN Module)**

The False button is set by default. Select the True button to activate using of cURL to communicate with PayPal. It is possible only if the cURL was detected in the system.

### **Add Shipping To Amount (for PayPal IPN Module)**

The False button is set by default. Select the True button to add the shipping amount to order amount (will set shipping amount to \$0 in PayPal).

### **Add Tax To Amount (for PayPal IPN Module)**

The False button is set by default. Select the True button to add the tax amount to order amount (will set tax amount to \$0 in PayPal).

### **Update Stock Before Payment (for PayPal IPN Module)**

The False button is set by default. Select the True button to activate updating of Products Stock even when the payment is not yet COMPLETED.

### **Allowed Currencies (for PayPal IPN Module)**

In this field specify allowed currencies in which customers can pay.  
The following currencies are allowed by PayPal: USD, EUR, GBP, CAD, JPY  
The following currencies are allowed in your shop: EUR, USD, JPY, GBP

*Note: To add more currencies to your shop, go to the Localization > Currencies section of Admin Panel.*

### **PayPal IPN Test Mode (for PayPal IPN Module)**

The False button is set by default. Select the True button to run a module in the TEST MODE. You will be able to send a TEST IPN from Admin > PayPal\_IPN > Test\_IPN page, BUT you will not be able to receive the real IPN's from PayPal.

### **2CheckOut Login/Store Number (for 2CheckOut Module)**

In this field specify a number used for the 2CheckOut module service.

### **2CheckOut Merchant Notifications (for 2CheckOut Module)**

The False button is set by default. Select the True button to activate emailing of receipts to a store owner.

### **Transaction Type (for PSiGate Module)**

Select a type of transaction to use for the PSiGate module (Sale, PreAuth – pre authorization, PostAuth – post authorization).

### **Credit Card Collection (for PSiGate Module)**

Select a place where the credit card details will be collected: **Locally** (directly in the shop) or **Remotely** (in the PSiGate module).

### **PSiGate Transaction Currency (for PSiGate Module)**

Select a currency to use for credit card transactions (CAD or USD).
